Boom Lift Attachments for Lift Trucks

Boom lifts are equipment that has a platform which could be lowered or lifted to different heights, hence making this piece of equipment an important necessity in a wide variety of professions. Offered in many different specialized types such as aerial hoists, scissor lift trucks, and knuckle boom lifts, each type operates very specifically.

The common aerial lift variation is often utilized at ski lodges to carry people who are not comfortable using the ski lift. Working in a manner similar to that of an elevator, skiers are transported up the mountain in stages, stopping at stations along the way until they access the summit. Aerial lifts are also utilized in construction, moving people safely up and down the sides of multi-level construction sites.

Scissor hoists are also in the boom jack class. They are utilized normally by utility companies as an idyllic system to allow employees to complete maintenance and repair on wires and cables that are attached to poles. Phone, cable television and power providers have relied on the efficiency of this kind of boom jack for years.

Knuckle boom forklifts are built to be utilized in coarse terrain locales where the need to be able to reverse direction is necessary. This style of boom can fit into various tights places that a scissor jack cannot. Working between numerous equipment in a production plant or in close proximity stuck between two walls, the knuckle boom also features a standard table equipped with rails for protection and employee safety.

The type of boom lift required by organizations will sometimes depend on the nature of the work required. Fortunately, there are suitable designs for almost any task.
