

Quick Attach Work Platform

Versatile lift truck work platforms attach safely and quickly to the lift truck through putting in tines into tine pockets and chaining platform to the lift truck. These enhancements are frequently utilized so as to safely and efficiently move maintenance workers. The tine or fork lock needs to be engaged to be able to lock the platform to the blades properly. This accessory has a checker floor plate platform as well as a long strap with hook to be able to securely connect the platform to the blade truck. These work platforms are made of welded steel and powder coated using a blue finish. They have a hoisting capacity of 1000 lbs.
