Crown

Crown has designed their RC 5500 Series to concentrate on the realistic difficulties faced in the workplace. This innovative unit features best-in-class comfort and ergonomics and intelligent technology. Keeping the operator comfortable and safe normally results in more efficiency.

3-Wheel Stand-Up Counterbalanced Truck

The 3-Wheel Stand-Up Counterbalanced Truck comes in 3000, 3500 and 4000 lb. capacity.

Performance Versatility

Crown's RC 5500 have been made to work effectively in a busy work environment. Whether it is operating in an aisle or on the dock, this model achieves greatness. It has been made to offer the operator unmatched visibility, unparalleled ride control and the best ergonomics. The exclusive FlexRide technology provided by Crown offers a suspended floorboard in order to eliminate much of the shock and vibration which operators must work with each and every day. Interestingly enough, a lot of the competitor's sit-down truck models are unable to match the lessened impact levels offered by the RC 5500 Series.

Visibility - From a side-stance position in both directions of travel, this model provide maximum visibility for the operator. A low-profile offers a clear view mast as well a sculpted chassis allows the operators to be able to clearly see the fender, the fork tips and all around the truck. This optimum view improves overall safety and reduces damage.

Speed - Through Access 1 2 3 Technology combined with the newest AC traction control, top travel speeds are amongst the best in the business and achieved. Performance levels are able to be custom tuned in order to match the operator's skill level or the application requirement.

Operator Safety & Comfort

Crown's FlexRide has a suspended floorboard that can significantly enhance the overall work performance of the employee by improving their comfort and lessening their exhaustion. The constant shock and vibration could result in extreme operator exhaustion for those exposed to those motions everyday specially during travel over dock plates, expansion joints and rough surfaces.
